

Using iMovie for Digital Story Creation

Cut to Close-Up

Make your images for your Cut to Close-up in Photoshop.

1. **Make sure Ken Burns Effect is NOT selected!**

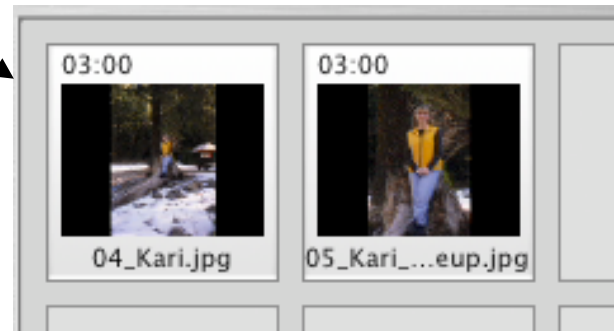

2. In iMovie, click on the Clips tab.

3. Go to **File > Import** and select your images for your build.

4. The files will import into the clips pane.

5. Drag your images onto the timeline in the order in which you want them to appear (such as the far away image first and then the zoomed in image).

6. Once the images are on the timeline, you can change the duration of them by double-clicking on the image (the ones on the timeline, not the ones in the Clips dock) and change the duration there.
